

# Unify for Gmail® 8.8

Unified Messaging for Cisco Unity Connection®

Cloud Service with available  
Speech2Txt™

## LEADING THE WAY FOR RESPONSIVE ORGANIZATIONS

**Voicemail is changing.** Like email, it's still an important communication capability. But why settle for mere voicemail delivery when you can both hear and see your voicemails.

### Seamless & Dynamic.

Unify for Gmail synchronizes your Cisco voicemail account with your Gmail inbox. The moment a message arrives, it's immediately accessible. You get notification, playback and optional message transcription, all in one place.

Unify dynamically updates the message status at every endpoint. Deleted messages delete everywhere, read messages update the message waiting light on the handset.

Unify is leading the way with next generation features users want today.

# Unify for Gmail® 8.8

Unified Messaging for Cisco Unity Connection®

Cloud Service with available  
Speech2Txt™

## Convenient

Access your messages via phone handset or email client — whatever is most appropriate at the time.

## Voicemail can now be Visual

Our optional Speech2Txt options add the ability to discretely preview voicemail messages contents right within the same message. Speech2Txt provides up to 30 seconds of transcription, and Speech2Txt+ offers extended transcription.

## Keep the Team Connected

Unify for Gmail offers convenience and efficiency. It's perfect for employees without an office phone and employees rarely in their office. Your staff can be more responsive with email as their communications command center.

## Easy to Manage

Unify is easy to provision & manage. Dynamic cleanup eliminates stored communications that can consume grooming time and storage. Cloud service removes hardware expense and requires no extra support resources. Set up of users is easy; with options for automated provisioning.
