

## ONE ARCHIVE PLATFORM FOR SECURE MULTI-DATA RETENTION

**OneVault delivers a centralized archiving platform built to manage not just one data type—but many. All manageable from one place.** This includes email, corporate instant messages, video conference recordings, Team workspaces and more.

In today's world these are the systems where business is conducted. Capturing these important daily interactions ensures not only regulatory compliance, but provides valuable support for Legal, HR, Operations, Customer Service, Audit and Business Continuity.

**Archiving communications has become essential for:**

- **Regulatory compliance**
- **Privacy compliance**
- **e-Discovery and Legal hold needs**
- **Organizational knowledge management and retention of prior discussions**
- **Business Continuity & Ransomware readiness**

OneVault is your solution for tamper-proof compliance retention that scales with your needs.

## BALANCES EASE OF WITH SECURITY & ACCOUNTABILITY

With OneVault, all data is automatically retained, organized and decommissioned according to your retention policies. Flexible fast data discovery with defensible chain of custody power an intuitive user experience. SmartKeyword Actions™ enable automated keyword notification and process workflows. Perfect for operational workflows, HR notifications, Legal Hold management and more

Data is securely retained in a tamper-proof archive with role based access. Those with designated rights can easily run discovery searches with results in seconds. Legal, Compliance and Operations are assured of consistent policy application, activity oversight and secure data retention. Server and storage loads are reduced and often software licensing can be reduced.

- Meet regulatory requirements. (FINRA, SEC, HIPAA, FOIA, SOX, GDPR, CCPA, & more.)
- Fast, flexible e-Discovery from one screen across all archived data types.
- Reduces costs: manpower, legal and IT hardware.
- Powerful, user-friendly e-Discovery.
- Customized policy-based retention.
- Knowledge Management repository.
- Tamper-proof archive with role-based access.
- Cloud-powered business continuity.
- Fully encrypted and air-gapped from on-premise systems in the event of ransomware.
- Role-based security with activity audit trail.
